                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em:, EMBL; Sw:, SWISSPROT; TI:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 20, constructed by the Sanger Centre Chromosome 20 Mapping Group. Further information can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1269
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human DNA sequence from clone RP4-718J7 on chromosome 20q13.31-13.33 Contains the PCK1 gene for soluble phosphoenolpyruvate carboxykinase 1, part of a novel gene similar to mouse DLM-1 (tumour stroma and activated macrophage protein), the 3' end of the TMEPAI gene encoding an androgen induced 1b transmembrane protein (PMEPAL), two putative novel genes, a CpG island, ESTs, STSs and GSSs, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence is the entire insert of clone RP4-718J7 The true end of clone RP5-1007E6 is at 71437 in this sequence. The true right end of clone RP4-579F20 is at 43945 in this sequence. RP4-718J7 is from the library RPGI-4 constructed by the group o Pieter de Jong.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human DNA sequence from clone RP5-1059L7 on chromosome 20q13.2-13.33 Contains the 5' end of the TMEPAI (PMEPAI) gene encoding an androgen induced 1b transmembrane protein, ESTs, segss and two CpG islands, complete segmence
                                                                                                                                                                                                 only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 20, constructed by the Sanger Centre Chromosome 20 constructed by the Sanger Centre Chromosome 20
Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr20
This sequence is the entire insert of clone RP5-1059L7 The true left end of clone RP11-402F1 is at 106677 in this sequence. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >- 30); an attempt was made to resolve all sequencing problems, such
                                                                                                                                                                                                                                                                                                                                                                                                                 requests: clonerequest@sanger.ac.uk
on Mar 6, 2000 this sequence version replaced gi:7007305.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Direct Submission

The invention relates to an isolated nucleic acid molecule encoding a CC Mechanically Induced Vascular Receptor (MYVR)-1 polypeptide having CC cardiac cell anti-apoptotic activity and fragments of it provided CC they are not identical to Genbank sequences AI761441.1, AI594390, CC NM,004338 and AQ177461. Also included are expression vectors, host cells, the MIVR-1 polypeptide, MIVR-1 binding peptides, modulators of MIVR-1, contacting a molecule having cardiac cell anti-apoptotic activity with a candidate agent, where the molecule is a nucleic acid molecule comprising MIVR-1, IEX-1, VDUP-1 BTG-2 and TIS-11d or its CC expression product, determining if the anti-apoptotic activity is CC expression product, determining if the anti-apoptotic activity is CC expression of such disease and nucleic acids of the invention are useful for CC apoptotic molecules and nucleic acids of the invention are useful for treating, diagnosing and monitoring progression of such diseases and CC disorders as characterised by increased apoptotic cell-death of vascular cendothelial cells e.g. cardiac hypertrophy, myocardial infarction, CC stroke, arteriosclerosis and heart failure. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                       The present invention relates to methods of detecting a prostate cancer-associated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancer-associated polynucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancer-associated polynucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer-associated genes are useful for diagnosing or treating prostate cancer, as well as for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gish
                                                                                                                                                                                                                                                                                identifying modulators of prostate cancer or agents that inhibit prostate cancer. The nucleic acid sequences are particularly useful in gene therapy, as a vaccine or in antisense applications.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to human nucleic acids (AA157798-AA161369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinyinhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Tang

cc proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand cc factor-associated disorder, regulate extracellular matrix structuring, cc cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative cc disorders, such as cancer, modulate the proliferation, differentiation, cc and/or function of cells that appear in the bone marrow, and leukocytes, cc treat bone marrow, blood and hematopoletic associated diseases and confict bronchitis, bronchial asthma and bronchiectasis, intestinal cc disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, cerebral codema, hydrocephalus, brain herniations, latrogenic disease, cerebral toxoplasmosis, parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC expression or activity of NEUAP. Antagonists of NEUAP are useful for CC treating or preventing disorder associated with increased expression CC or activity of NEUAP. NEUAP or their fragments or derivatives are CC useful for treating neurological disorder such as epilepsy, ischemic CC erebrovascular disease, stroke, cerebral neoplasma, Alzheimer's CC disease, Pick's disease, NEUAPs are also useful for treating other CC demyelinating disease, bacterial and viral meningitis, prion CC demyelinating diseases, bacterial and viral meningitis, prion CC demyelinating diseases of the nervous system, neurofibromatosis, other CC developmental disorders of the central nervous system, cerebral CC palsy, neuroskeletal disorders, autonomic nervous system disorders, CC cranial nerve disorders, spinal cord diseases, muscular dystrophy and CC disease including mood, anxiety and schizophrenic disorders, a cell disorders including mood, anxiety and schizophrenic disorders, a cell condiferative disorder such as actinic keratosis, arteriosclerosis, bursitis, cirrhosis, hepatitis, mixed connective haemogloblnuria, cancers of the adrenal gland, bladder, bone, bone marrow, brain, breast, cervix, and an autoimmune/inflammatory capporative disorder such as acquired immunodeficiency syndrome (AIDS), Addison's disease, adult respiratory distress syndrome, allergies, ankylosing complications of cancer, hemodalaysis, and extracorporeal circulation, viral, bacterial, fungal parasitic, protozoal, and helminthic confections, and trauma. This sequence was given the Incyte ID no.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               88888888888888888888888888888888888

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a secretory polynucleotide (designated sptm) CC comprising any of 567 polynucleotide sequences (ABZ35837-ABZ36403), a CC naturally occurring polynucleotide sequence at least 90 % identical to CC the polynucleotide sequence, a polynucleotide complementary to them or an CC RNA equivalent of them. The polypeptide or polynucleotide are useful for treating, preventing or diagnosing a disease or condition associated with CC the expression of functional SPFM. These are particularly useful for CC diagnosing, treating or preventing autoimmune/inflammatory disorders (e.g. acquired immunodefictency syndrome, anaemia, asthma or Crohn's CC (diagnosing, treating or preventing autoimmune/inflammatory disorders (c.g. acquired immunodefictency syndrome, anaemia, asthma or Crohn's CC diagnosing, troke, Alzheimer's disease, Creutzfeldt-Jakob disease, CC disease), neurological disorders (e.g. epilepsy, Huntington's disease, anxiety, CC multiple sclerosis, cerebral palsy, Parkinson's disease, anxiety, CC multiple sclerosis, cerebral palsy, Parkinson's disease, anxiety, CC schizophrenia or amnesia), or cell proliferative disorders (e.g. psoriasis, polycythemia vera, or cancers including adenocarcinoma, CC leukaemia, lymphoma, melanoma, myeloma, sarcoma or cancers of the brain, CC whose the complement of the printed content of the sequence data for this patent did not form part of the printed content of the printed content

AAA75163-65 encode human TANGO 261 proteins. The specification also describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial asthma and bronchiectasis, intestinal disorders, spleen associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor associated disorder; cell trafficking; cancer; hematopoietic associated disease; attelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; latrogenic disease; inflammation; meningitis; halzheimer's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder; ss.

Novel human and murine secreted proteins designated TANGO 216, 261, 262, 266 and 267 useful as modulating agents of cellular processes, e.g. for treating cancer -

Disclosure; Page -; 175pp; English.

AAA75163-65 encode human TANGO 261 proteins. The specification also CC describes TANGO 266, TANGO 262, and TANGO 267. The TANGO CC polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The CC cellular differentiation and/or modulate cellular adhesion. The CC disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, and cell trafficking and/or migration, modulate cellular interactions, cc modulate cell adhesion in proliferative disorders, such as cancer, CC modulate the proliferation, differentiation, and/or function of cells cc modulate the proliferation, differentiation, and/or function of cells cc ashma and bornochiectasis, intestinal disorders, atelectasis, pronchital cc unimonary congestion or cedema, emphysema, chronic bronchitis, bronchial cc diseases, modulate renal disorders, treat cardiovascular disorders such cc as ischemic heart disease, modulate the proliferation, differentiation, can allow for function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral oedema, bacterial and viral meningitis, Alzheimer's blsease, cerebral coccephalus, brain herniations, laterogenic disease, inflammations, bacterial mand annother annother than treat herafic disorders.

disorder, regulate extracellular matrix structuring, cellular adhesion, cc and cell trafficking and/or migration, modulate cellular interactions, cc modulate cell adhesion in proliferation, adifferentiation, and/or function of cells commodulate the proliferation, differentiation, and/or function of cells ct that appear in the bone marrow, and leukocytes, treat bone marrow, blood cc and hematopoietic associated diseases and disorders, atelectasis, cc pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial cc asthma and bronchiectasis, intestinal disorders, spleen associated cd diseases, modulate renal disorders, treat cardiovascular disorders such cas ischemic heart disease, modulate the proliferation, differentiation, cc and/or function of bone and cartilage cells and to treat bone and/or cc cartilage associated with the ovaries, and cerebral oedema, chydrocephalus, brain herniations, latrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's Disease, cerebral corcephalus and encephalitis, and treat hepatic disease, brain cancers, cc hydrocephalus and encephalitis, and treat hepatic disease, cerebral concers, parkinson's disease, multiple sclerosis, brain cancers, conceit the present sequence does not appear in the specification; it was created using information provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor associated disorder; cell trafficking; cancer; hematopoietic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; latrogenic disease; inflammation; meningitis; alzheimer's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                       AAA75163-65 encode human TANGO 261 proteins. The specification also describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any you Willebrand factor associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CDS

The invention relates to an isolated polypeptide comprising a sequence CC with 60 % identity to one of prostate specific protein (PSP) sequences, CC or comprising an amino acid sequence encoded by one of 136 nucleotide CC or comprising an amino acid sequence encoded by one of 136 nucleotide comprising the wector comprising the polynucleotide, a host cell CC comprising the vector comprising the polynucleotide. The specification CC comprising the protein or polynucleotide. The PSP and PSNA are CC vaccine comprising and monitoring the presence and metastases of CC useful for diagnosing and monitoring the presence and metastases of CC prostate cancer in a patient. The PSNA is useful for determining the presence of prostate specific protein in a sample, and CC determining the presence of prostate specific protein in a sample, and CC determining the prostate cancer, which induces an immune CC polypeptide and a kit is useful for detecting a risk of cancer or polypeptide and a kit is useful for detecting a risk of cancer or polypeptide and a kit is useful for detecting a risk of cancer or polypeptide and transcript-derived nucleic acid samples and also in components and transcript-derived nucleic acid samples and also in microarrays. Sequences of PSP and PSNA are useful as hybridisting nucleic acids from both CC detabases for search analysis as well as in sequence analysis algorithms. PSNA is useful as components in cCC detabases for search analysis as well as in sequence analysis algorithms. PSNA is useful as pSNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polypeptide useful for diagnosing and monitoring the presence metastases of prostate cancer in a patient and as a component in databases for search analysis as well as in sequence analysis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        01-NOV-2000; 2000US-244782P

RESULT 11
The present sequence is one of 3351 sequences in a library of human CC polynucleotides. The library is used to detect differentially expressed CC genes correlated with a cancerous state of a mammalian cell and can CC detect colon, prostate, breast and lung cancer. The library can be used to produce probes for detection of mRNA and to produce additional copies CC of the polynucleotides. The probes can be used for chromosome mapping of CC the polynucleotide and for detection of transcription levels. Ribozymes CC or antisense oligonucleotides can be generated. The polynucleotides and CC their gene products are used as genetic or biochemical markers (e.g. in CC blood or tissues) that will detect the earliest changes along the CC carcinogenesis pathway and/or monitor the efficacy of therapies and CC preventive interventions. The polynucleotides, polypeptides and CC preventive interventions are used in pharmaceutical compositions to CC treat the cancers and proliferative disorders such as neoplasia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AF65983
